

SAMS®

SURVEY REVIEW

Surveyor's Name: Dave Seagrim

Survey Received: 1/29/26

Designation Requested: Y&SC

Vessel Name: "MY Bad"

Region: Canada

If Current Member: Click or tap here to enter text.

Member Date: 1/14/2025

Exp. Rating: SA-1

Must Upgrade Date: 1/14/2029

Check only if they apply

☒ Scope of Survey stating how the survey was or will be conducted and what was and was not done.

Comments: Click or tap here to enter text.

☐ Statement of which mandatory national standards and regulations (Canada Shipping Act, Transport Canada including cited sections of ABYC, USCG, FCC, CE, OSHA, etc.) were referenced in the survey findings'?

Comments: Click or tap here to enter text.

☐ Statement of which voluntary standards (ABYC, NFPA, ISO etc.) are referenced in the surveyor's findings.

Comments: **Minimum number of mandatory and voluntary regulatory bodies stated.**

Basic information in sufficient quantity to positively identify the vessel?

☒ Name/Manufacturer/Year/Dimensions?

☐ Appropriate Vessel Photo(s)?

☒ HIN (or builder's plate / label) photo.

☐ Government documentation / registration / license number – were papers viewed and in order (Y/N)?

☐ Engine and major equipment serial numbers?

Comments: **All photos too small along with photo of the HIN.**

Do not have photos of four corners of the vessel.

No photo of vessel licence and no information of expiry.

Engine and transmission plate photos too small to see information and reader unable to decipher numbers on plates.

Details about the survey inspection and parties involved.

☒ Purpose of survey (pre-purchase, insurance, appraisal etc.)

☒ Name of party survey was conducted for.

☒ Name of the party requesting the survey.

- ☒ Date of survey inspection?
- ☐ Date of survey Report?
- ☒ Location of inspection?
- ☐ How the vessel was observed (out of the water, on trailer etc.)?
- ☐ Parties present during the survey?
- ☐ Statement on the type and condition of all “below the waterline” or “below the maximum heeled waterline” through hull fittings?
- ☐ Details on each system in the vessel including condition, appearance, maintenance, operation, observed function?
- ☐ Listing of any independent surveys conducted in conjunction with the survey (engine survey, electrical survey, ultrasonic gauging etc.)

Comments: Date that report completed not shown.

Clear statement that vessel was laid up for winter storage not provided.

No statement of who was present at time of the inspection.

Poor statements regarding type and condition below the waterline.

Valuation:

- ☒ Statement of Current or Fair Market value?
- ☒ Statement of Estimated Replacement Value?
- ☒ Statement of method used to arrive at the valuation figures (soldboats, BUC, NADA etc.)?

Comments: Statement of method used for valuation, however, on used BUC. Not sufficient to provide a reasonable valuation.

Recommendations:

- ☒ Systems and/or equipment that fail to comply with mandatory national standards and regulations (Canada Shipping Act, Transport Canada including cited sections of ABYC, USCG, FCC, CE, OSHA, etc.) in effect at the time of survey.
- ☒ Voluntary standards deficiencies (ABYC, NFPA, etc.) with surveyor’s opinion.
- ☒ Equipment the surveyor recommends should be added or upgraded.
- ☒ Photos which show deviation from the standards or norm (i.e. expensive equipment).
- ☒ Summary including surveyor’s opinion as to the vessel’s maintenance, evidence of previous damage or submersion, and/or quality or repairs.

Comments: Several ABYC standards cited, however, little or no mention of TP1332 or other.

Safety Equipment Listed?

- ☐ Mandatory safety equipment required for the vessel’s size and use.
- ☒ Detectors installed (i.e. carbon monoxide, gasoline, propane, smoke)?
- ☐ Safety equipment carried over and above mandatory items (i.e. jack - lines and harnesses, life – raft, EPIRB)?
- ☐ Describe bilge pumps – location – serviceability – high water alarm – were they tested?

- ☐ Summary including surveyor's opinion as to the vessel's maintenance, evidence of previous damage or submersion, and/or quality or repairs.

Comments: Missing statements of minimum mandatory safety equipment for vessel size.

Found only one mention of a bilge pump (vessel would have several) and no info on location, rating, etc.

Report Format:

- ☐ Report well written in simple and concise language?

Is the report easy to follow?

Is indexing logical and easy to follow?

Is the report over long or too short?

- ☒ Written in standard 8 ½" x 11" format?

- ☐ Pages numbered: Page "#" of "#" pages?

- ☐ Surveyor signed and dated report?

- ☒ Does the report disclose that he/she is a member of SAMS?

- ☒ If so, is membership class indicated? (i.e. SA or Surveyor Associate)

- ☐ Does the report have the deficiencies compiled and organized to importance at the end of the report?

- ☐ Surveyor's Certification included?

"I certify that, to the best of my knowledge and belief: The statements of fact contained in this report"

Comments: Report missing a lot of detail pertaining to most systems.

Remember: What is it; does it work; what is overall condition.

The report could be reduced considerably by eliminating a lot of wasted space.

Some pages numbered; all must be numbered.

Report was signed but no date added; particularly when completed.

Many deficiencies have been rated too severely and many that should only be noted within the report.

Recommend not using term "moisture meter" and "sea trial"; use "conductivity meter" & "limited trial run" – protect yourself. High readings is not a certainty of underlying moisture, therefore, careful of recommendations.

Missing description of the overall vessel, such as, layout, type of vessel, etc.

- ☐ *This survey meets the standards expected of a SAMS® Surveyor.*

- ☒ *This survey does not meet the standards expected of a SAMS® Surveyor.*

General Comments: Be extremely careful inspecting lithium batteries; insurance companies are very particular regarding these systems.
